Задание 1. Weighted Random Recommendation

Напишите код для случайных рекоммендаций, в которых вероятность рекомендовать товар прямо пропорциональна логарифму продаж

- Можно сэмплировать товары случайно, но пропорционально какому-либо весу
- Например, прямопропорционально популярности. Вес = log(sales_sum товара)

Бейзлайн

Создадим датафрейм с покупками юзеров на тестовом датасете (последние 3 недели)
